Golsa Joghtayie Group

Golsa Joghatai Engineering Office in Babol is a creative and established firm specializing in design, supervision, execution, and construction. They see architecture as more than building—it's a process that combines beauty, function, and identity. Their young, dynamic, and creative team uses contemporary knowledge to deliver professional and lasting results. Their goal is to make every space the best version of itself, in line with current standards.

ARCHITECTURE AND INTERIOR

Support and Guarantee

We respect your time with predictable project planning and timelines.

On-time delivery

We are with you throughout all stages of project implementation to respond to your questions, needs, and concerns quickly and accurately.

Quality Materials

We use reputable brands and durable materials that are suitable for the project's environmental conditions.

INTERIOR DESIGN

ARKA PET HOSPITAL

The interior design of the pet hospital is developed around creating a calm, welcoming, and functional environment for both pets and their owners. The spatial organization focuses on clear circulation, efficient access to medical services, and a comfortable experience from the moment of entry. Carefully selected materials, colors, lighting, and functional zones work together to create a contemporary healthcare environment that balances clinical requirements with a sense of warmth and familiarity.

Functional Integration

The entrance shelving is designed as an integrated functional element, providing a dedicated space for pet accessories and essential items. Beyond its practical purpose, the shelving contributes to the organization and visual identity of the entrance, ensuring that functionality becomes an intentional part of the interior design.

RECEPTION

A welcoming reception area designed to create a clear, calm, and seamless arrival experience for pets and their owners.

INTERIOR DESIGN

GROOMING AREA

A dedicated grooming area designed to provide a comfortable and functional space for pet washing and care.

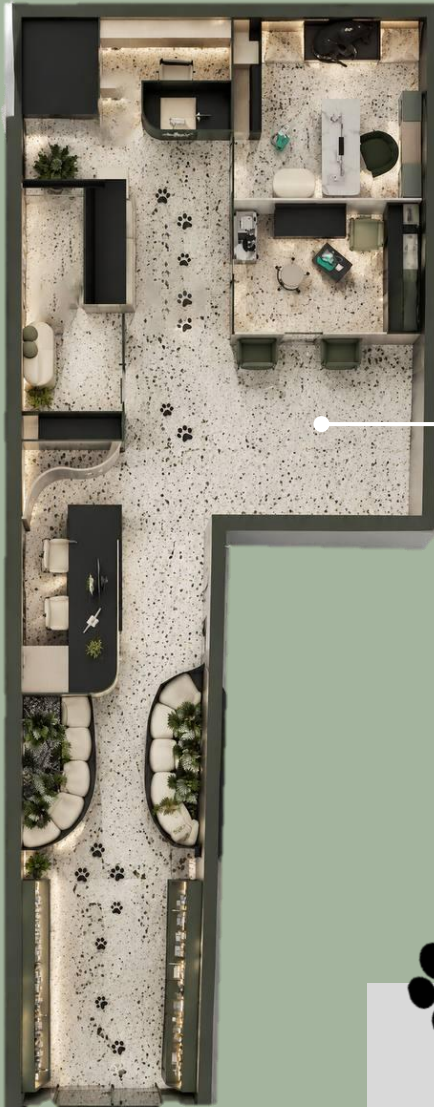

PET PHARMACY

The pharmacy is designed as an organized and accessible space within the Pet Hospital, providing a dedicated area for medication and essential pet care products. Thoughtful storage solutions and clear spatial organization ensure efficient access while maintaining a clean and contemporary visual character. The design integrates functionality with the overall interior language of the hospital, creating a seamless connection between care, treatment, and everyday pet needs.

MINI BAR

The mini bar is designed as a compact and functional space, providing a convenient area for refreshments and short breaks. Its integrated layout and carefully considered storage solutions maintain visual order while complementing the overall interior design of the Pet Hospital.

**Good Coffee,
Happier Pets**

INFECTIOUS INJECTIONS

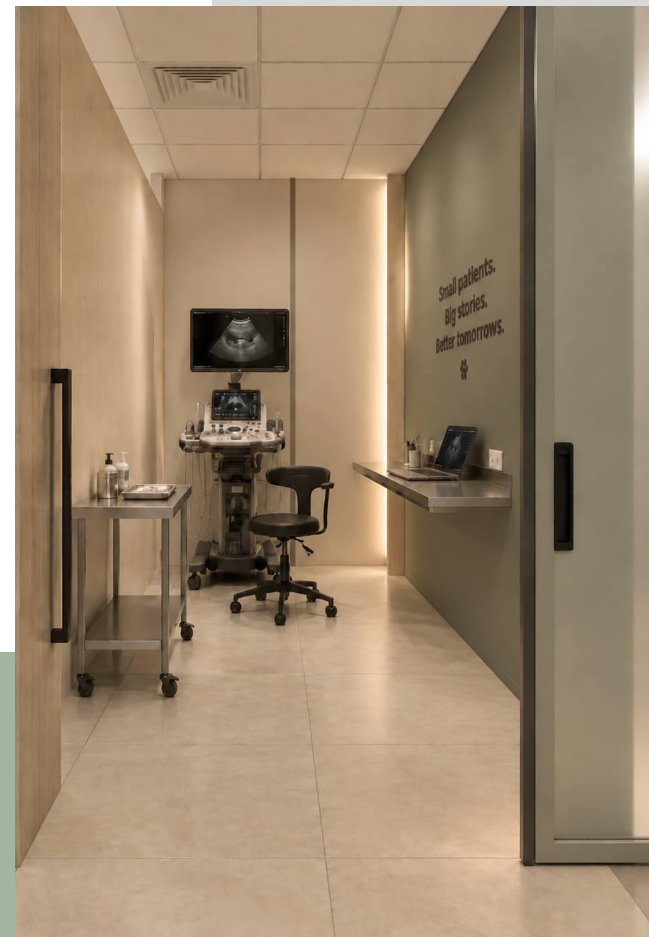

The infectious injection room is designed as a dedicated clinical space with a clear and controlled layout, supporting safe and efficient treatment procedures. The spatial organization prioritizes functionality, hygiene, and ease of access while maintaining a calm and reassuring environment for both pets and their owners.

EXAMINATION & PHYSIOTHERAPY

The examination and physiotherapy area is designed to support both routine assessments and rehabilitation treatments within a comfortable and functional setting. Careful spatial planning provides sufficient room for clinical procedures and therapeutic activities, while creating an organized environment that responds to the specific needs of each pet.

The surgery and ultrasound rooms are designed as interconnected yet controlled spaces, ensuring efficient access while maintaining separation from other clinical areas. Careful zoning, controlled circulation, and clean material choices create a hygienic and calm environment for both diagnosis and treatment.

MANAGEMENT

The management office is designed as a dedicated and organized workspace, providing a comfortable and focused environment for administrative tasks, daily coordination, and decision-making. The layout combines functionality with a calm and professional atmosphere, supporting both individual work and internal communication.

TERRACE

The spacious terrace provides an open-air extension to the interior, creating a refreshing space for relaxation and informal interactions. Its generous layout offers flexibility for different uses while introducing natural light, fresh air, and a sense of openness to the overall environment.

PET BOARDING

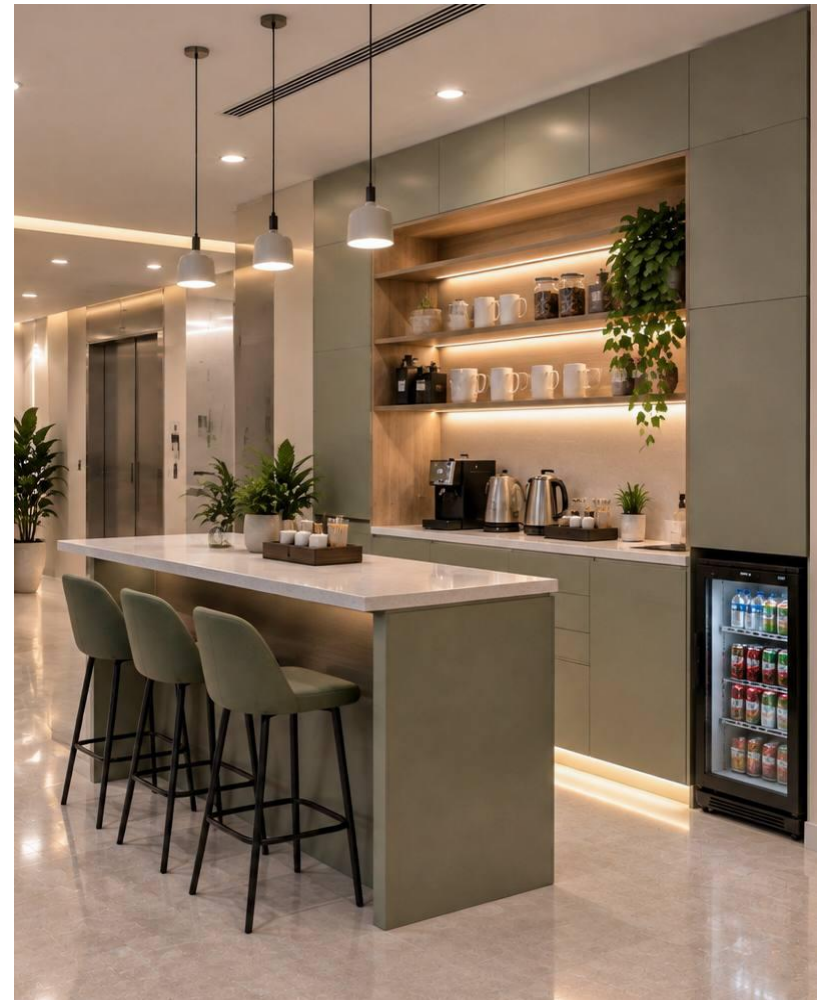

ANIMAL WARD

The clinic is designed around the comfort and well-being of pets, creating a calm and reassuring environment throughout the space. Thoughtful spatial planning, gentle visual elements, and carefully selected materials help reduce stress while supporting the needs of both animals and their owners.

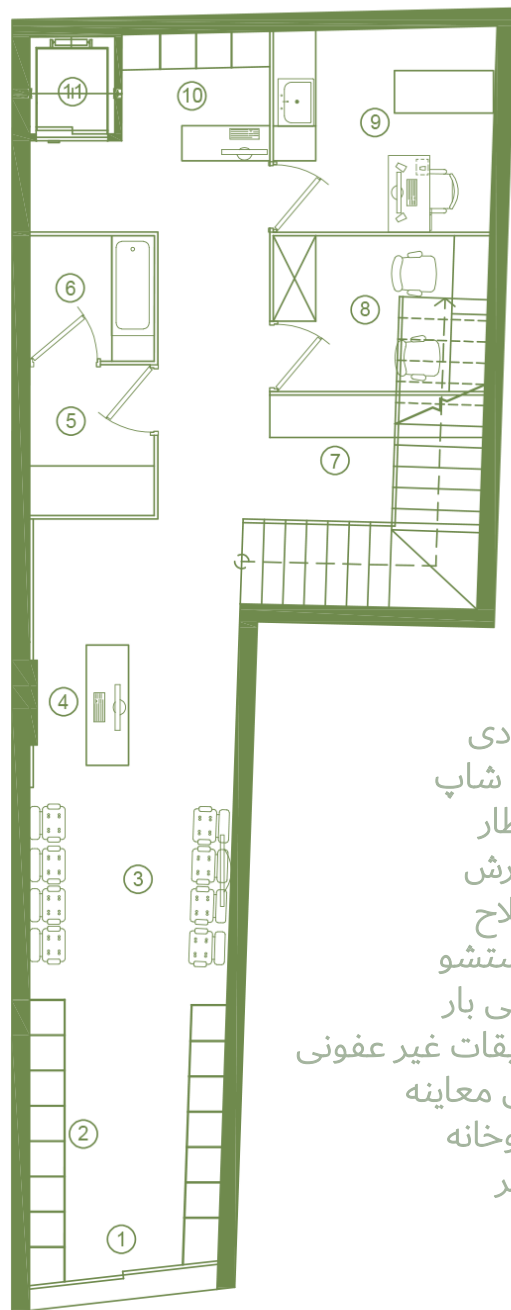

STAFF LOUNGE

KITCHEN & DINING

The staff rest and kitchen area is designed to provide a comfortable space for relaxation and daily nourishment. By creating a dedicated environment for breaks, meals, and recovery, the design supports staff well-being and helps maintain energy and focus throughout the working day.

GROUND FLOOR PLAN

The ground floor is organized around a clear sequence of public, reception, and clinical functions. The layout creates a smooth transition from the entrance and pet shop to the waiting and reception areas, while treatment, examination, pharmacy, and surgical spaces are positioned in a more controlled zone. This arrangement allows different functions to work together while maintaining a clear and comfortable flow for both pets and their owners.

FIRST FLOOR PLAN

The first floor is dedicated to specialized diagnostic, treatment, and patient care functions. The layout brings together spaces such as infectious care and injections, physiotherapy and examination, radiology, and ultrasound, creating an integrated environment for diagnosis and treatment. The surgical suite is positioned in close relation to the recovery area to support an efficient transition from surgery to post-operative care. A service lift facilitates the movement of equipment and supplies between floors, while the balcony provides an additional open space that contributes to the overall environmental quality of the floor.

SECOND FLOOR PLAN

The second floor is designed to accommodate inpatient care, staff facilities, and administrative functions. The floor includes dedicated boarding and hospitalization areas, providing a comfortable and controlled environment for animals during their stay and recovery. A laboratory supports the diagnostic process, while the management office provides a dedicated space for administrative activities. Staff facilities, including a rest area, kitchen, and bathroom, are integrated into the layout to support the daily needs of the medical team. A service lift ensures convenient vertical movement of equipment and supplies, while the terrace adds an open-air space to the overall composition of the floor.
